SCRAPERS

COMPANY PROFILE

Our company is designed to serve the needs of the heavy industry in the local and international market.

It specializes in the production of polyurethane scrapers providing innovative solutions to meet the most demanding applications.

POLYURETHANE

Polyurethane is a material with outstanding technical properties.

It outperforms rubber and plastic, exhibiting high resistance to environmental factors, such as to heat, abrasion, oil and aging.

It is your perfect choice, since it increases the profitability reducing the downtime cost.

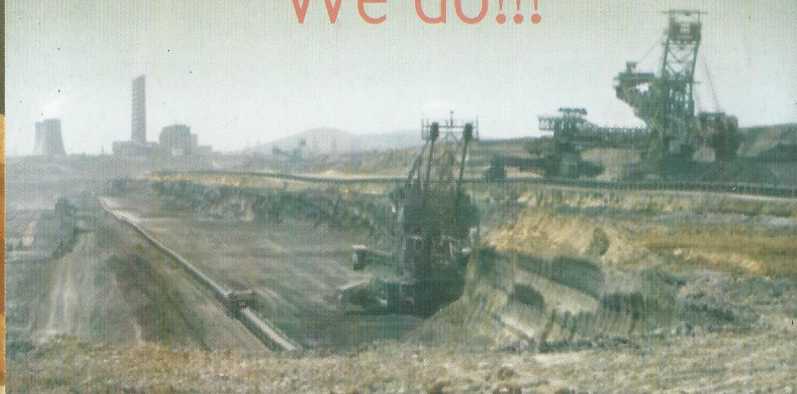

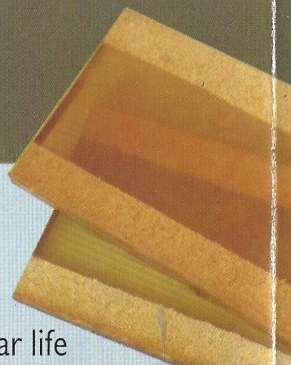

This scraper can be turned around giving you the longest wear life

PROPERTIES

- Our PU scrapers exhibit outstanding technical properties with high cut and wear resistance.
- Taking into consideration your unique needs, we offer a wide range of sizes, hardnesses and thicknesses to suit many different applications.
- The appropriate polyurethane material can be chosen for working temperature from -40°C (-40°F) to 135°C (275°F).
- The hardness can range from 80 Shore A to 97 Shore A.
- Available in lengths up to 2500 mm (100 inches) to cover any belt width.
