COMPANY PROFILE

Our company specializes in the production of polyurethane cotton picker parts for John Deere and Case IH cotton Harvesters. We are in the cotton industry since 1992 and serve the needs of the farmers in the local and international market.

WHAT IS ASYMMETRICAL DOFFER?

Asymmetrical Doffers are used on John Deere cotton pickers with in-line drum arrangement. Asymmetrical Doffers have lugs with asymmetric profile.

WHERE TO FIND IT?

NO MORE MELTING!

In hard picking conditions doffers melt due to the high working temperature. In these conditions cotton fibers stuck on the elastomer part of the doffer and the farmer has to stop and replace the parts. Asymmetrical Doffers work in higher temperature than common doffers expanding their working life span. No more stopping and replacing, this U.S. Patented Doffer keeps working!

QUALITY CONTROL

We take our work seriously and so do the quality of our products! Every asymmetrical doffer is checked during the production and is sent in our quality control lab to examine every aspect of its function. Our lab experts make sure that each and every product meet our high requirements!
